## Great News!

### Preserving Beauty While You're Losing Weight

**GLP-1 medications** have created a revolution in weight loss, allowing patients to reach a healthy weight, manage blood sugar within stable ranges, and lower the risk of heart attacks and strokes.

With all these benefits, weight loss with GLPs can affect your beauty and body profile. Rapid weight change can lead to facial hollowing and laxity (loose tissue). Weight loss can reduce lean muscle mass and affect body tone.

CDCOP's GLP Beauty Preservation Program is designed to counter these effects without reversing weight loss – to sculpt, tighten and preserve youth while patients get healthy. Addressing these effects is best done as weight loss is occurring, not when the goal is reached.

**We'll tailor a program to your specific needs.** Call, text, or email us today to discuss suggested treatment packages!
